

# Syntax Checker

Tom is facing a problem that he is using Notepad to code. And now, he wants to confirm that there are no errors in the usage of brackets in his code.

Your task is to help Tom to check if there is an error in the usage of brackets where opening brackets are [ { and (, and the corresponding closing brackets are ] } and ). The code can contain any brackets from the set [] {} ().

## Input

The input contains multiple test cases. Each test case contains a string  $S$  in one line which consists of characters whose ASCII codes range from 32 to 126 (In other words, there will be blank space in  $S$ ).

It is guaranteed that the length of  $S$  is in the range from 1 to 100000.

## Output

Print "Success" if all the brackets [] {} () are matched. Otherwise, print the position where the first unmatched closing bracket is found, and if there are no unmatched closing bracket, print the position of the first unmatched opening bracket.

| Sample Input                    | Sample Output |
|---------------------------------|---------------|
| {(){}[]}                        | Success       |
| {([[]}                          | 3             |
| {([[]]}                         | 7             |
| {{}() }                         | 5             |
| {[]}{}                          | 4             |
| ( [43]( i++ ; ) ) { lol = 3 ; } | Success       |

## Hints

In the second test case, all unmatched brackets are opening brackets and the first one is '(' at position 3.  
In the third test case, the first unmatched closing bracket char is '}' at position 7, although there is unmatched opening bracket occurring earlier at position 3.

# ASCII TABLE
